Golf Course Capital Programme

We have drafted the seventh year's Capital Programme based on:

- the essential winter maintenance works needed around the course;
- the implementation of the greens renovation programme recommended by the Sports Turf Research Institute; and
- the introduction of some recommendations from our Course Architect, Stuart Rennie, regarding health and safety, tree management, bunker improvements and improving our Par 3 holes.

2023/24 Winter Programme

It is intended that the following programme of work will be carried out over the winter period:

- Create a new path adjacent to the ladies' 8th tee / 7th winter green.

- Lowering the face and improving the shape of the bunker in front of the 13th green.

- Continuing the programme of tree maintenance.

- Fill in the first bunker on the left of the 3rd (nearest the tee) and the bunker on the right to help direct play from the properties on the left.

- Start an ongoing programme of levelling tees.

- Preparation and restoration work for the replacement greenside sprinklers (6 greens).

- Possible work relating to 15th hole redesign.

General Maintenance

Greens: Greens to be aerated with AIR2G2 and verti-drainer and lightly top-dressed. A constant check will be made throughout the winter months for outbreaks of disease (fusarium) and will be treated with a preventative spray as required.

Tees: Tees (including practice tee) to be aerated and top-dressed.

Fairways: Fairways to be aerated and over seeded as required.

Pathways: All pathways will be checked, weeded, edged and resurfaced ready for the new season.

Fences: All boundary fences and safety netting will be checked and either repaired or replaced.

Hedges: All hedges will be trimmed.

Machinery: All machinery to be stripped down and cylinders sharpened.

Painting: Course benches, markers, etc to be painted or varnished.
